VIRTUAL TOKEN (VITO)

AR (Augmented Reality)/VR
(Virtual Reality)
development focused
around Trading Vision Goal-
Boards along with a
Decentralized Peer to Peer
Marketplace for
buying/selling limited
quantity items.

ABSTRACT

Virtual Token (VITO) is a cryptocurrency token which will be used with AR (Augmented Reality) / VR (Virtual Reality) items in a goal board/vision room environment. There will be a decentralized peer to peer marketplace for items you can buy and sell that will be limited in quantity creating an environment with supply and demand for these items. Decentralized peer to peer buying and selling means no risk for the end user like a typical exchange where your tokens are stored on a 3rd party. Vito will also be used in turn with <https://startcrypto.online> company which introduces people to learn about cryptocurrency for free in terms of how to buy/sell Bitcoin and other Cryptocurrency, learn how to trade, learn about Masternodes and Mining (PoS vs PoW). Most of the training is available online through videos and live events will be hosted as well. The Goal/Vision board idea comes from what I have learnt through multiple teachings with trading courses to keep yourself accountable and give you motivation needed to achieve your goals. This AR/VR take on the idea really brings things to life and gives the end user a much greater experience and level of motivation. Existing real world companies will be partnered to allow us the legal rights usage of the items used in the space such as Cars/Yachts/Real Estate/Jewellery just to name a few.

INTRODUCTION

Vito is a Cryptocurrency token which will be used in the AR/VR space while combining a decentralized marketplace for people to buy and sell items. This brings a new level of motivation not yet achieved before through your typical vision/goal board where you put pictures of things you like and want to achieve through financial on your wall for example.

AR/VR Marketplace for Vision Board Items;
Having Goals and a vision board when learning any new skill such as trading is a very important piece to have for the visual aspect of what you are trying to achieve, this brings improved levels of motivation to keep pushing through with learning your new skill and getting through the hard times when trying to learn any new skill gets difficult, with the AR/VR side bringing something extra to the table, people will be able to see and feel their goals in a virtual world experience, with the marketplace people will also be able to buy/sell things as they please, you will not get stuck with something you have purchased for a sole purpose but be able to pass that along to friends/family or even sell to others. These items will be limited which will generate supply and demand for the items. Items such as Cars/Yachts/Real Estate/Jewellery along with many more categories will be available.

WHY BLOCKCHAIN?

Blockchain in simple terms is a Distributed database that allows tamper proof verifiable data, most people understand blockchain as financial ledger, while this is what it was designed for initially for Bitcoin, it can be implemented into any kind of environment where data that you wish not be able to be changed exists. Data published on the blockchain cannot be deleted by anyone or anything. In terms of us using blockchain it is to prove the items are infact limited in quantity, meaning you can be sure if you buy or sell a rare item, you know how many there really are.

Cryptocurrency is an explosive new asset class as the technology is new and always being improved, what better way to create a market place which hasn't been designed before to go hand in hand to bring two great technologies together.

TOKEN DETAILS

Vito Breakdown

Total Supply: 10 Billion

Ticker: VITO

Distribution Details:

50% of tokens will be held in reserve for the team and founders and will be sold off in small quantities to fund development and partnerships. 50% of the tokens will be used for Staking, this means if you hold tokens in your wallet, you will generate an amount of tokens as your reward for holding the tokens.
